

## 3-Channel Linear LED Drivers

### Features

- $\pm 6\%$  Current Accuracy when  $V_{OUT}$  is between 4V and 15V
- 90V Standoff Voltage
- Separate Enable Pins for each Channel for PWM Dimming
- Overtemperature Protection
- 8-Lead SOIC (with Heat Slug) Package

### Applications

- LCD Backlighting
- Indicator Lamps

### General Description

The CL320/CL325/CL330 are designed to drive three strings of LEDs at a constant current of 20 mA, 25 mA and 30 mA, respectively.

The drive current is fixed, with a  $\pm 6\%$  tolerance over a  $V_{OUT}$  range of 4V to 15V. Separate enable pins for each channel allow for PWM dimming, three-step linear dimming or individual disconnection of faulty LED strings.

Overtemperature protection circuitry shuts down all three channels when the nominal die temperature reaches 135°C. Normal operation resumes when the die temperature drops by 30°C.

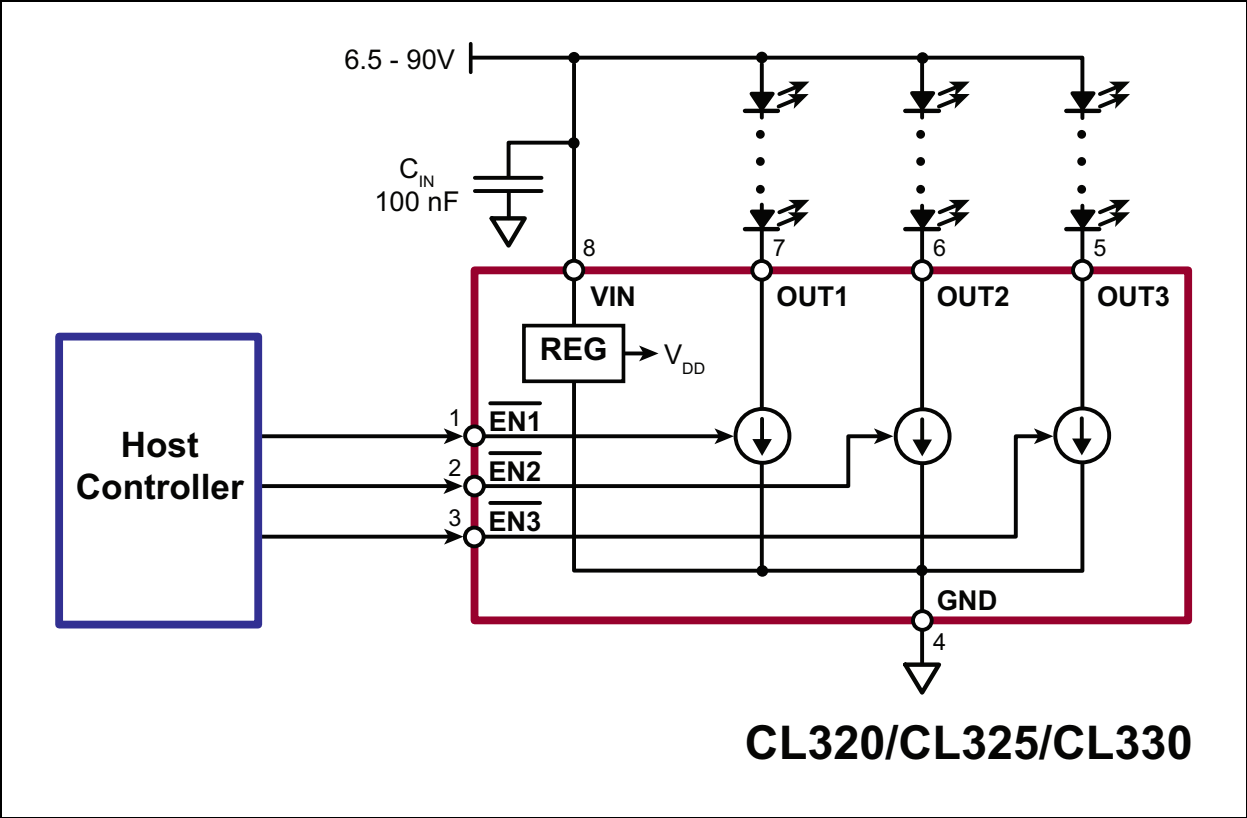

The CL320/CL325/CL330 are available in the 8-lead SOIC (with heat slug) package and require a single ceramic bypass capacitor which may be shared among several drivers.

## 3.0 DETAILED DESCRIPTION

### 3.1 Higher LED Current

By paralleling outputs, higher LED currents can be achieved. In addition, linear dimming in three discrete steps may be obtained by enabling 1, 2 or 3 outputs.

**FIGURE 3-1:** Paralleling Outputs of the CL320/CL325/CL330 LED Drivers.

### 3.2 Lower Power Dissipation in the CL320/CL325/CL330

Power dissipation in the CL320/CL325/CL330 can be lowered in multiple ways. The following figures indicate some of the possible means to reduce power dissipation in the IC. Refer to [Figure 3-2](#), [Figure 3-3](#) and [Figure 3-4](#).

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
