

## ADC342x Quad-Channel, 12-Bit, 25-MSPS to 125-MSPS, Analog-to-Digital Converter

### 1 Features

- Quad Channel
- 12-Bit Resolution
- Single Supply: 1.8 V
- Serial LVDS Interface
- Flexible Input Clock Buffer with Divide-by-1, -2, -4
- SNR = 70.2 dBFS, SFDR = 87 dBc at  $f_{IN} = 70$  MHz
- Ultra-Low Power Consumption:
  - 98 mW/Ch at 125 MSPS
- Channel Isolation: 105 dB
- Internal Dither and Chopper
- Support for Multi-Chip Synchronization
- Pin-to-Pin Compatible with 14-Bit Version
- Package: VQFN-56 (8 mm × 8 mm)

### 2 Applications

- Multi-Carrier, Multi-Mode Cellular Base Stations
- Radar and Smart Antenna Arrays
- Munitions Guidance
- Motor Control Feedback
- Network and Vector Analyzers
- Communications Test Equipment
- Nondestructive Testing
- Microwave Receivers
- Software-Defined Radios (SDRs)
- Quadrature and Diversity Radio Receivers

### 3 Description

The ADC342x are a high-linearity, ultra-low power, quad-channel, 12-bit, 25-MSPS to 125-MSPS, analog-to-digital converter (ADC) family. The devices are designed specifically to support demanding, high input frequency signals with large dynamic range requirements. An input clock divider allows more flexibility for system clock architecture design and the SYSREF input enables complete system synchronization. The ADC342x family supports serial low-voltage differential signaling (LVDS) in order to reduce the number of interface lines, thus allowing for high system integration density. The serial LVDS interface is two-wire, where each ADC data are serialized and output over two LVDS pairs. An internal phase-locked loop (PLL) multiplies the incoming ADC sampling clock to derive the bit clock that is used to serialize the 12-bit output data from each channel. In addition to the serial data streams, the frame and bit clocks are also transmitted as LVDS outputs.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
ADC342x	VQFN (56)	8.00 mm × 8.00 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

**Spectrum at 10-MHz IF**  
(SFDR = 97 dBc, SNR = 70.4 dBFS, SINAD = 70.4 dBFS, THD = 98 dBc, HD2 = 95 dBc, HD3 = 97 dBc)

D201

## 6 Pin Configuration and Functions

### Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
AVDD	6, 7, 10, 11, 14, 15, 20, 23, 28, 29, 32, 33, 36	I	Analog 1.8-V power supply
CLKM	21	I	Negative differential clock input for the ADC
CLKP	22	I	Positive differential clock input for the ADC
DA0M	4	O	Negative serial LVDS output for wire-0 of channel A
DA0P	3	O	Positive serial LVDS output for wire-0 of channel A
DA1M	2	O	Negative serial LVDS output for wire-1 of channel A
DA1P	1	O	Positive serial LVDS output for wire-1 of channel A
DB0M	56	O	Negative serial LVDS output for wire-0 of channel B
DB0P	55	O	Positive serial LVDS output for wire-0 of channel B
DB1M	54	O	Negative serial LVDS output for wire-1 of channel B
DB1P	53	O	Positive serial LVDS output for wire-1 of channel B
DC0M	46	O	Negative serial LVDS output for wire-0 of channel C
DC0P	45	O	Positive serial LVDS output for wire-0 of channel C
DC1M	44	O	Negative serial LVDS output for wire-1 of channel C
DC1P	43	O	Positive serial LVDS output for wire-1 of channel C
DD0M	42	O	Negative serial LVDS output for wire-0 of channel D
DD0P	41	O	Positive serial LVDS output for wire-0 of channel D
DD1M	40	O	Negative serial LVDS output for wire-1 of channel D
DD1P	39	O	Positive serial LVDS output for wire-1 of channel D
DCLKM	51	O	Negative bit clock output
DCLKP	50	O	Positive bit clock output
DVDD	5, 38, 47, 52	I	Digital 1.8-V power supply
FCLKM	49	O	Negative frame clock output
FCLKP	48	O	Positive frame clock output
GND	PowerPAD™	I	Ground, 0 V
INAM	8	I	Negative differential analog input for channel A
INAP	9	I	Positive differential analog input for channel A
INBM	13	I	Negative differential analog input for channel B
INBP	12	I	Positive differential analog input for channel B
INCM	30	I	Negative differential analog input for channel C
INCP	31	I	Positive differential analog input for channel C
INDM	35	I	Negative differential analog input for channel D
INDP	34	I	Positive differential analog input for channel D
PDN	37	I	Power-down control. This pin can be configured via the SPI. This pin has an internal 150-kΩ pulldown resistor.
RESET	24	I	Hardware reset; active high. This pin has an internal 150-kΩ pulldown resistor.
SCLK	16	I	Serial interface clock input. This pin has an internal 150-kΩ pulldown resistor.
SDATA	17	I	Serial interface data input. This pin has an internal 150-kΩ pulldown resistor.
SDOUT	19	O	Serial interface data output
SEN	18	I	Serial interface enable; active low. This pin has an internal 150-kΩ pullup resistor to AVDD.
SYSREFM	26	I	Negative external SYSREF input
SYSREFP	25	I	Positive external SYSREF input
VCM	27	O	Common-mode voltage for analog inputs

## 7 Specifications

### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
Analog supply voltage range, AVDD		-0.3	2.1	V
Digital supply voltage range, DVDD		-0.3	2.1	V
Voltage applied to input pins	INAP, INBP, INCP, INDP, INAM, INBM, INCM, INDM	-0.3	min (1.9, AVDD + 0.3)	V
	CLKP, CLKM	-0.3	AVDD + 0.3	
	SYSREFP, SYSREFM	-0.3	AVDD + 0.3	
	SCLK, SEN, SDATA, RESET, PDN	-0.3	3.9	
Temperature	Operating free-air, T <sub>A</sub>	-40	85	°C
	Operating junction, T <sub>J</sub>		125	
	Storage, T <sub>stg</sub>	-65	150	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 7.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
<b>SUPPLIES</b>					
AVDD	Analog supply voltage range	1.7	1.8	1.9	V
DVDD	Digital supply voltage range	1.7	1.8	1.9	V
<b>ANALOG INPUT</b>					
V <sub>ID</sub>	Differential input voltage	For input frequencies < 450 MHz		2	V <sub>PP</sub>
		For input frequencies < 600 MHz		1	
V <sub>IC</sub>	Input common-mode voltage	VCM ± 0.025			V
<b>CLOCK INPUT</b>					
Input clock frequency		Sampling clock frequency		15 <sup>(2)</sup>	125 <sup>(3)</sup>
Input clock amplitude (differential)		Sine wave, ac-coupled		0.2	1.5
		LPECL, ac-coupled		1.6	
		LVDS, ac-coupled		0.7	
Input clock duty cycle		35%	50%	65%	
Input clock common-mode voltage		0.95			V
<b>DIGITAL OUTPUTS</b>					
C <sub>LOAD</sub>	Maximum external load capacitance from each output pin to GND	3.3			pF
R <sub>LOAD</sub>	Single-ended load resistance	100			Ω

- (1) After power-up, use only the RESET pin to reset the device for the first time; see the [Register Initialization](#) section for details.  
(2) See [Table 3](#) for details.  
(3) With the clock divider enabled by default for divide-by-1. Maximum sampling clock frequency for the divide-by-4 option is 500 MSPS.

## 7.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		ADC342x	UNIT
		RTQ (VQFN)	
		56 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	25.3	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	9.5	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	3.4	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	0.2	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	3.3	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	0.5	°C/W

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).

## 7.5 Electrical Characteristics: General

Typical values are over the operating free-air temperature range, at T<sub>A</sub> = 25°C, full temperature range is T<sub>MIN</sub> = –40°C to T<sub>MAX</sub> = 85°C, maximum sampling rate, 50% clock duty cycle, AVDD = DVDD = 1.8 V, and –1-dBFS differential input, unless otherwise noted.

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>ANALOG INPUT</b>					
	Differential input full-scale		2.0		V <sub>PP</sub>
r <sub>i</sub>	Input resistance	Differential at dc	6.6		kΩ
c <sub>i</sub>	Input capacitance	Differential at dc	3.7		pF
V <sub>OC(VCM)</sub>	VCM common-mode voltage output		0.95		V
	VCM output current capability		10		mA
	Input common-mode current	Per analog input pin	1.5		μA/MSPS
	Analog input bandwidth (3 dB)	50-Ω differential source driving 50-Ω termination across INP and INM	540		MHz
<b>DC ACCURACY</b>					
E <sub>O</sub>	Offset error		–25	25	mV
α <sub>EO</sub>	Temperature coefficient of offset error		± 0.024		mV/°C
E <sub>G(REF)</sub>	Gain error as a result of internal reference inaccuracy alone		–2	2	%FS
E <sub>G(CHAN)</sub>	Gain error of channel alone		–2		%FS
α <sub>(EGCHAN)</sub>	Temperature coefficient of E <sub>G(CHAN)</sub>		±0.008		Δ%FS/Ch
<b>CHANNEL-TO-CHANNEL ISOLATION</b>					
Crosstalk <sup>(1)</sup>	f <sub>IN</sub> = 10 MHz	Near channel		105	dB
		Far channel		105	
	f <sub>IN</sub> = 100 MHz	Near channel		95	
		Far channel		105	
	f <sub>IN</sub> = 200 MHz	Near channel		94	
		Far channel		105	
	f <sub>IN</sub> = 230 MHz	Near channel		92	
		Far channel		105	
	f <sub>IN</sub> = 300 MHz	Near channel		85	
		Far channel		105	

(1) Crosstalk is measured with a –1-dBFS input signal on the aggressor channel and no input on the victim channel.

## 7.6 Electrical Characteristics: ADC3421, ADC3422

Typical values are over the operating free-air temperature range, at  $T_A = 25^\circ\text{C}$ , full temperature range is  $T_{\text{MIN}} = -40^\circ\text{C}$  to  $T_{\text{MAX}} = 85^\circ\text{C}$ , maximum sampling rate, 50% clock duty cycle, AVDD = DVDD = 1.8 V, and –1-dBFS differential input, unless otherwise noted.

PARAMETER	ADC3421			ADC3422			UNIT
	MIN	TYP	MAX	MIN	TYP	MAX	
ADC clock frequency			25			50	MSPS
Resolution	12			12			Bits
1.8-V analog supply current		54	71		71	90	mA
1.8-V digital supply current		45	71		56	90	mA
Total power dissipation		177	240		228	305	mW
Global power-down dissipation		5	17		5	17	mW
Standby power-down dissipation		34	75		35	75	mW

## 7.7 Electrical Characteristics: ADC3423, ADC3424

Typical values are over the operating free-air temperature range, at  $T_A = 25^\circ\text{C}$ , full temperature range is  $T_{\text{MIN}} = -40^\circ\text{C}$  to  $T_{\text{MAX}} = 85^\circ\text{C}$ , maximum sampling rate, 50% clock duty cycle, AVDD = DVDD = 1.8 V, and –1-dBFS differential input, unless otherwise noted.

PARAMETER	ADC3423			ADC3424			UNIT
	MIN	TYP	MAX	MIN	TYP	MAX	
ADC clock frequency			80			125	MSPS
Resolution	12			12			Bits
1.8-V analog supply current		92	107		119	145	mA
1.8-V digital supply current		68	100		98	145	mA
Total power dissipation		288	365		391	475	mW
Global power-down dissipation		5	17		5	17	mW
Standby power-down dissipation		40	88		43	103	mW

## 7.8 AC Performance: ADC3421

Typical values are over the operating free-air temperature range, at  $T_A = 25^\circ\text{C}$ , full temperature range is  $T_{\text{MIN}} = -40^\circ\text{C}$  to  $T_{\text{MAX}} = 85^\circ\text{C}$ , ADC sampling rate = 25 MSPS, 50% clock duty cycle, AVDD = DVDD = 1.8 V, and –1-dBFS differential input, unless otherwise noted.

PARAMETER		TEST CONDITIONS	ADC3421 ( $f_s = 25 \text{ MSPS}$ )						UNIT
			DITHER ON			DITHER OFF			
			MIN	TYP	MAX	MIN	TYP	MAX	
SNR	Signal-to-noise ratio (from 1-MHz offset)	$f_{\text{IN}} = 10 \text{ MHz}$	70.9			71.1			dBFS

(1) Reported from a 1-MHz offset.

**AC Performance: ADC3421 (continued)**

Typical values are over the operating free-air temperature range, at  $T_A = 25^\circ\text{C}$ , full temperature range is  $T_{\text{MIN}} = -40^\circ\text{C}$  to  $T_{\text{MAX}} = 85^\circ\text{C}$ , ADC sampling rate = 25 MSPS, 50% clock duty cycle,  $\text{AVDD} = \text{DVDD} = 1.8\text{ V}$ , and  $-1\text{-dBFS}$  differential input, unless otherwise noted.

PARAMETER	TEST CONDITIONS	ADC3421 ( $f_S = 25\text{ MSPS}$ )						UNIT
		DITHER ON			DITHER OFF			
		MIN	TYP	MAX	MIN	TYP	MAX	
HD2	Second-order harmonic distortion	$f_{\text{IN}} = 10\text{ MHz}$		93		92		dBc
		$f_{\text{IN}} = 20\text{ MHz}$	84	100		94		
		$f_{\text{IN}} = 70\text{ MHz}$		93		92		
		$f_{\text{IN}} = 100\text{ MHz}$		94		93		
		$f_{\text{IN}} = 170\text{ MHz}$		86		85		
		$f_{\text{IN}} = 230\text{ MHz}$		86		82		
HD3	Third-order harmonic distortion	$f_{\text{IN}} = 10\text{ MHz}$		96		90		dBc
		$f_{\text{IN}} = 20\text{ MHz}$	84	91		85		
		$f_{\text{IN}} = 70\text{ MHz}$		93		88		
		$f_{\text{IN}} = 100\text{ MHz}$		85		82		
		$f_{\text{IN}} = 170\text{ MHz}$		89		89		
		$f_{\text{IN}} = 230\text{ MHz}$		82		82		
Non HD2, HD3	Spurious-free dynamic range (excluding HD2, HD3)	$f_{\text{IN}} = 10\text{ MHz}$		99		92		dBc
		$f_{\text{IN}} = 20\text{ MHz}$	87	98		91		
		$f_{\text{IN}} = 70\text{ MHz}$		96		92		
		$f_{\text{IN}} = 100\text{ MHz}$		95		93		
		$f_{\text{IN}} = 170\text{ MHz}$		92		90		
		$f_{\text{IN}} = 230\text{ MHz}$		97		91		
THD	Total harmonic distortion	$f_{\text{IN}} = 10\text{ MHz}$		90		86		dBc
		$f_{\text{IN}} = 20\text{ MHz}$	81	90		83		
		$f_{\text{IN}} = 70\text{ MHz}$		89		85		
		$f_{\text{IN}} = 100\text{ MHz}$		84		80		
		$f_{\text{IN}} = 170\text{ MHz}$		84		83		
		$f_{\text{IN}} = 230\text{ MHz}$		80		79		
IMD3	Two-tone, third-order intermodulation distortion	$f_{\text{IN1}} = 45\text{ MHz}$ , $f_{\text{IN2}} = 50\text{ MHz}$		-98		-98		dBFS
		$f_{\text{IN1}} = 185\text{ MHz}$ , $f_{\text{IN2}} = 190\text{ MHz}$		-91		-91		

## 7.9 AC Performance: ADC3422

Typical values are over the operating free-air temperature range, at  $T_A = 25^\circ\text{C}$ , full temperature range is  $T_{\text{MIN}} = -40^\circ\text{C}$  to  $T_{\text{MAX}} = 85^\circ\text{C}$ , ADC sampling rate = 50 MSPS, 50% clock duty cycle, AVDD = DVDD = 1.8 V, and –1-dBFS differential input, unless otherwise noted.

PARAMETER		TEST CONDITIONS	ADC3422 ( $f_s = 50$ MSPS)						UNIT
			DITHER ON			DITHER OFF			
			MIN	TYP	MAX	MIN	TYP	MAX	
SNR	Signal-to-noise ratio (from 1-MHz offset)	$f_{\text{IN}} = 10$ MHz	70.8			71			dBFS
		$f_{\text{IN}} = 20$ MHz	68.9	70.6		70.8

## 7.12 Digital Characteristics

The dc specifications refer to the condition where the digital outputs are not switching, but are permanently at a valid logic level 0 or 1. AVDD = DVDD = 1.8 V, and –1-dBFS differential input, unless otherwise noted.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>DIGITAL INPUTS (RESET, SCLK, SDATA, SEN, PDN)</b>						
V <sub>IH</sub>	High-level input voltage	All digital inputs support 1.8-V and 3.3-V CMOS logic levels	1.3			V
V <sub>IL</sub>	Low-level input voltage	All digital inputs support 1.8-V and 3.3-V CMOS logic levels			0.4	V
I <sub>IH</sub>	High-level input current	RESET, SDATA, SCLK, PDN	V <sub>HIGH</sub> = 1.8 V	10		μA
		SEN <sup>(1)</sup>	V <sub>HIGH</sub> = 1.8 V	0		μA
I <sub>IL</sub>	Low-level input current	RESET, SDATA, SCLK, PDN	V <sub>LOW</sub> = 0 V	0		μA
		SEN	V <sub>LOW</sub> = 0 V	10		μA
<b>DIGITAL INPUTS (SYSREFF, SYSREFM)</b>						
V <sub>IH</sub>	High-level input voltage			1.3		V
V <sub>IL</sub>	Low-level input voltage			0.5		V
	Common-mode voltage for SYSREF			0.9		V
<b>DIGITAL OUTPUTS (CMOS Interface, SDO<sub>UT</sub>)</b>						
V <sub>OH</sub>	High-level output voltage		DVDD – 0.1	DVDD		V
V <sub>OL</sub>	Low-level output voltage			0	0.1	V
<b>DIGITAL OUTPUTS (LVDS Interface)</b>						
V <sub>ODH</sub>	High-level output differential voltage	With an external 100-Ω termination	280	350	460	mV
V <sub>ODL</sub>	Low-level output differential voltage	With an external 100-Ω termination	–460	–350	–280	mV
V <sub>OCM</sub>	Output common-mode voltage			1.05		V

(1) SEN has an internal 150-kΩ pullup resistor to AVDD. SPI pins (SEN, SCLK, SDATA) can be driven by 1.8 V or 3.3 V CMOS buffers.

## 7.13 Timing Requirements: General

Typical values are at T<sub>A</sub> = 25°C, AVDD = DVDD = 1.8 V, and –1-dBFS differential input, unless otherwise noted. Minimum and maximum values are across the full temperature range: T<sub>MIN</sub> = –40°C to T<sub>MAX</sub> = 85°C.

		MIN	TYP	MAX	UNIT
t <sub>A</sub>	Aperture delay	1.24	1.44	1.64	ns
	Aperture delay matching between two channels of the same device		±70		ps
	Aperture delay variation between two devices at same temperature and supply voltage		±150		ps
t <sub>J</sub>	Aperture jitter		130		f <sub>S</sub> rms
	Wake-up time:	Time to valid data after exiting standby power-down mode		35	200
Time to valid data after exiting global power-down mode (in this mode, both channels power down)			85	450	μs
ADC latency <sup>(1)</sup> :	2-wire mode (default)		9		Clock cycles
	1-wire mode		8		Clock cycles
t <sub>SU_SYSREF</sub>	SYSREF reference time:	Setup time for SYSREF referenced to input clock rising edge	1000		ps
t <sub>H_SYSREF</sub>		Hold time for SYSREF referenced to input clock rising edge	100		ps

(1) Overall latency = ADC latency + t<sub>PDI</sub>.

## 7.14 Timing Requirements: LVDS Output<sup>(1)(2)</sup>

Typical values are at  $T_A = 25^\circ\text{C}$ ,  $AVDD = DVDD = 1.8\text{ V}$ , and  $-1\text{-dBFS}$  differential input, 6x Serialization (2-Wire Mode),  $C_{LOAD} = 3.3\text{ pF}$ <sup>(3)</sup>, and  $R_{LOAD} = 100\ \Omega$ <sup>(4)</sup>, unless otherwise noted.. Minimum and maximum values are across the full temperature range:  $T_{MIN} = -40^\circ\text{C}$  to  $T_{MAX} = 85^\circ\text{C}$ .

		MIN	TYP	MAX	UNIT
$t_{SU}$	Data setup time: data valid to zero-crossing of differential output clock (CLKOUTP – CLKOUTM) <sup>(5)</sup>	0.43	0.5		ns
$t_{HO}$	Data hold time: zero-crossing of differential output clock (CLKOUTP – CLKOUTM) to data becoming invalid <sup>(5)</sup>	0.48	0.58		ns
$t_{PDI}$	Clock propagation delay: input clock falling edge cross-over to frame clock rising edge cross-over (15 MSPS < sampling frequency < 125 MSPS)	1-wire mode	4.5	6.5	ns
		2-wire mode	$0.44 \times t_S + t_{DELAY}$		ns
$t_{DELAY}$	Delay time	3	4.5	5.9	ns
	LVDS bit clock duty cycle: duty cycle of differential clock (CLKOUTP – CLKOUTM)		49%		
$t_{FALL}$ , $t_{RISE}$	Data fall time, data rise time: rise time measured from $-100\text{ mV}$ to $100\text{ mV}$ , $15\text{ MSPS} \leq \text{Sampling frequency} \leq 125\text{ MSPS}$		0.11		ns
$t_{CLKRISE}$ , $t_{CLKFALL}$	Output clock rise time, output clock fall time: rise time measured from $-100\text{ mV}$ to $100\text{ mV}$ , $15\text{ MSPS} \leq \text{Sampling frequency} \leq 125\text{ MSPS}$		0.11		ns

- (1) Measurements are done with a transmission line of a  $100\text{-}\Omega$  characteristic impedance between the device and load. Setup and hold time specifications take into account the effect of jitter on the output data and clock.
- (2) Timing parameters are ensured by design and characterization and are not tested in production.
- (3)  $C_{LOAD}$  is the effective external single-ended load capacitance between each output pin and ground.
- (4)  $R_{LOAD}$  is the differential load resistance between the LVDS output pair.
- (5) Data valid refers to a logic high of  $100\text{ mV}$  and a logic low of  $-100\text{ mV}$ .

**Table 1. LVDS Timing at Lower Sampling Frequencies: 6X Serialization (2-Wire Mode)**

SAMPLING FREQUENCY (MSPS)	SETUP TIME ( $t_{SU}$ , ns)			HOLD TIME ( $t_{HO}$ , ns)		
	MIN	TYP	MAX	MIN	TYP	MAX
25	2.61	3.06		2.75	3.12	
40	1.69	1.9		1.8	1.98	
60	1.11	1.23		1.18	1.31	
80	0.81	0.89		0.88	0.97	
100	0.6	0.68		0.68	0.77	

**Table 2. LVDS Timings at Lower Sampling Frequencies: 12X Serialization (1-Wire Mode)**

SAMPLING FREQUENCY (MSPS)	SETUP TIME ( $t_{SU}$ , ns)			HOLD TIME ( $t_{HO}$ , ns)		
	MIN	TYP	MAX	MIN	TYP	MAX
25	1.3	1.48		1.32	1.57	
40	0.76	0.88		0.79	0.97	
50	0.57	0.68		0.61	0.77

## 9 Detailed Description

### 9.1 Overview

The ADC342x are a high-linearity, ultra-low power, quad-channel, 12-bit, 25-MSPS to 125-MSPS, analog-to-digital converter (ADC) family. The devices are designed specifically to support demanding, high input frequency signals with large dynamic range requirements. An input clock divider allows more flexibility for system clock architecture design and the SYSREF input enables complete system synchronization. The ADC342x family supports a serial low-voltage differential signaling (LVDS) interface in order to reduce the number of interface lines, thus allowing for high system integration density. The serial LVDS interface is two-wire, where each ADC data are serialized and output over two LVDS pairs. An internal phase-locked loop (PLL) multiplies the incoming ADC sampling clock to derive the bit clock that is used to serialize the 12-bit output data from each channel. In addition to the serial data streams, the frame and bit clocks are also transmitted as LVDS outputs.

### 9.2 Functional Block Diagram

## 9.3 Feature Description

### 9.3.1 Analog Inputs

The ADC342x analog signal inputs are designed to be driven differentially. Each input pin (INP, INM) must swing symmetrically between  $(V_{CM} + 0.5\text{ V})$  and  $(V_{CM} - 0.5\text{ V})$ , resulting in a  $2\text{-}V_{PP}$  (default) differential input swing. The input sampling circuit has a 3-dB bandwidth that extends up to 540 MHz (50- $\Omega$  source driving 50- $\Omega$  termination between INP and INM).

### 9.3.2 Clock Input

The device clock inputs can be driven differentially (sine, LVPECL, or LVDS) or single-ended (LVCMOS), with little or no difference in performance between them. The common-mode voltage of the clock inputs is set to 0.95 V using internal 5-k $\Omega$  resistors. The self-bias clock inputs of the ADC342x can be driven by the transformer-coupled, sine-wave clock source or by the ac-coupled, LVPECL and LVDS clock sources, as shown in Figure 132, Figure 133, and Figure 134. See Figure 135 for details regarding the internal clock buffer.

NOTE:  $R_T$  = termination resistor, if necessary.

**Figure 132. Differential Sine-Wave Clock Driving Circuit**

**Figure 133. LVDS Clock Driving Circuit**

**Figure 134. LVPECL Clock Driving Circuit**

NOTE:  $C_{EQ}$  is 1 pF to 3 pF and is the equivalent input capacitance of the clock buffer.

Figure 135. Internal Clock Buffer

A single-ended CMOS clock can be ac-coupled to the CLKP input, with CLKM connected to ground with a 0.1- $\mu$ F capacitor, as shown in Figure 136. However, for best performance the clock inputs must be driven differentially, thereby reducing susceptibility to common-mode noise. For high input frequency sampling, TI recommends using a clock source with very low jitter. Band-pass filtering of the clock source can help reduce the effects of jitter. There is no change in performance with a non-50% duty cycle clock input.

Figure 136. Single-Ended Clock Driving Circuit

### 9.3.2.1 SNR and Clock Jitter

The signal-to-noise ratio of the ADC is limited by three different factors, as shown in Equation 1. Quantization noise (typically 74 dB for a 12-bit ADC) and thermal noise limit SNR at low input frequencies, and the clock jitter sets SNR for higher input frequencies.

$$SNR_{ADC}[dBc] = -20 \cdot \log \sqrt{\left(10^{\frac{SNR_{Quantization\ Noise}}{20}}\right)^2 + \left(10^{\frac{SNR_{Thermal\ Noise}}{20}}\right)^2 + \left(10^{\frac{SNR_{Jitter}}{20}}\right)^2} \quad (1)$$

The SNR limitation resulting from sample clock jitter can be calculated with Equation 2.

$$SNR_{Jitter}[dBc] = -20 \cdot \log(2\pi \cdot f_{in} \cdot T_{Jitter}) \quad (2)$$

The total clock jitter ( $T_{Jitter}$ ) has two components: the internal aperture jitter (130 fs for the device) which is set by the noise of the clock input buffer and the external clock.  $T_{Jitter}$  can be calculated with [Equation 3](#).

$$T_{Jitter} = \sqrt{(T_{Jitter,Ext.Clock\_Input})^2 + (T_{Aperture\_ADC})^2} \quad (3)$$

External clock jitter can be minimized by using high-quality clock sources and jitter cleaners as well as band-pass filters at the clock input; a faster clock slew rate improves the ADC aperture jitter. The devices have a typical thermal noise of 72.7 dBFS and internal aperture jitter of 130 fs. The SNR, depending on the amount of external jitter for different input frequencies, is shown in [Figure 137](#).

**Figure 137. SNR vs Frequency for Different Clock Jitter**

### 9.3.3 Digital Output Interface

The devices offer two different output format options, thus making interfacing to a field-programmable gate array (FPGA) or an application-specific integrated circuit (ASIC) easy. Each option can be easily programmed using the serial interface, as shown in [Table 3](#). The output interface options are:

- One-wire, 1x frame clock, 12x serialization with the DDR bit clock and
- Two-wire, 1x frame clock, 6x serialization with the DDR bit clock.

**Table 3. Interface Rates**

INTERFACE OPTIONS	SERIALIZATION	RECOMMENDED SAMPLING FREQUENCY (MSPS)		BIT CLOCK FREQUENCY (MHz)	FRAME CLOCK FREQUENCY (MHz)	SERIAL DATA RATE PER WIRE (Mbps)
		MINIMUM	MAXIMUM			
One-wire	12x	15		90	15	180
			80	480	80	960
Two-wire (Default after Reset)	6x	20 <sup>(1)</sup>		60	20	120
			125	375	125	750

(1) Use the LOW SPEED ENABLE register bits for low speed operation; see [Table 21](#).

#### 9.3.3.1 One-Wire Interface: 12x Serialization

In this interface option, the device outputs the data of each ADC serially on a single LVDS pair (one-wire). The data are available at the rising and falling edges of the bit clock (DDR bit clock). The ADC outputs a new word at the rising edge of every frame clock, starting with the LSB. The data rate is 12x sample frequency (12x serialization).

**9.3.3.2 Two-Wire Interface: 6x Serialization**

The two-wire interface is recommended for sampling frequencies above 65 MSPS. The output data rate is 6x sample frequency because six data bits are output every clock cycle on each differential pair. Each ADC sample is sent over the two wires with the six MSBs on Dx1P, Dx1M and the six LSBs on Dx0P, Dx0M, as shown in Figure 138.

**Figure 138. Output Timing Diagram**

## 9.4 Device Functional Modes

### 9.4.1 Input Clock Divider

The devices are equipped with an internal divider on the clock input. The clock divider allows operation with a faster input clock, thus simplifying the system clock distribution design. The clock divider can be bypassed for operation with a 125-MHz clock and the divide-by-2 option supports a maximum input clock of 250 MHz and the divide-by-4 option provides a maximum input clock frequency of 500 MHz.

### 9.4.2 Chopper Functionality

The devices are equipped with an internal chopper front-end. Enabling the chopper function swaps the ADC noise spectrum by shifting the  $1/f$  noise from dc to  $f_S / 2$ . [Figure 139](#) shows the noise spectrum with the chopper off and [Figure 140](#) shows the noise spectrum with the chopper on. This function is especially useful in applications requiring good ac performance at low input frequencies or in dc-coupled applications. The chopper can be enabled via SPI register writes and is recommended for input frequencies below 30 MHz. The chopper function creates a spur at  $f_S / 2$  that must be filtered out digitally.

### 9.4.3 Power-Down Control

The power-down functions of the ADC342x can be controlled either through the parallel control pin (PDN) or through an SPI register setting (see [register 15h](#)). The PDN pin can also be configured via SPI to a global power-down or standby functionality, as shown in [Table 4](#).

**Table 4. Power-Down Modes**

FUNCTION	POWER CONSUMPTION (mW)	WAKE-UP TIME ( $\mu$ s)
Global power-down	5	85
Standby	45	35

### 9.4.4 Internal Dither Algorithm

The ADC342x use an internal dither algorithm to achieve high SFDR and a clean spectrum. However, the dither algorithm marginally degrades SNR, creating a trade-off between SNR and SFDR. If desired, the dither algorithm can be turned off by using the DIS DITH CHx registers bits. [Figure 141](#) and [Figure 142](#) show the effect of using dither algorithms.

### 9.4.5 Summary of Performance Mode Registers

[Table 5](#) lists the location, value, and functions of performance mode registers in the device.

**Table 5. Performance Modes**

MODE	REGISTER SETTINGS	DESCRIPTION
Special modes	Registers 139 (bit 3), 239 (bit 3), 439 (bit 3), and 539 (bit 3)	Always write 1 for best performance
Disable dither	Registers 1 (bits 7:0), 134 (bits 5 and 3), 234 (bits 5 and 3), 434 (bits 5 and 3), and 534 (bits 5 and 3)	Disable dither to improve SNR
Disable chopper	Registers 122 (bit 1), 222 (bit 1), 422 (bit 1), and 522 (bit 1)	Disable chopper (shifts 1/f noise floor at dc)
High IF modes	Registers 11Dh (bit 1), 21Dh (bit 1), 41Dh (bit 1), 51Dh (bit 1), 308h (bits 7-6) and 608h (bits 7-6)	Improves HD3 by a couple of dB for IF > 100 MHz

## 9.5 Programming

The ADC342x can be configured using a serial programming interface, as described in this section.

### 9.5.1 Serial Interface

The device has a set of internal registers that can be accessed by the serial interface formed by the SEN (serial interface enable), SCLK (serial interface clock), SDATA (serial interface data), and SDOUT (serial interface data output) pins. Serially shifting bits into the device is enabled when SEN is low. Serial data SDATA are latched at every SCLK rising edge when SEN is active (low). The serial data are loaded into the register at every 24th SCLK rising edge when SEN is low. When the word length exceeds a multiple of 24 bits, the excess bits are ignored. Data can be loaded in multiples of 24-bit words within a single active SEN pulse. The interface can function with SCLK frequencies from 20 MHz down to very low speeds (of a few hertz) and also with a non-50% SCLK duty cycle.

## Programming (continued)

### 9.5.1.1 Register Initialization

After power-up, the internal registers **must** be initialized to their default values through a hardware reset by applying a high pulse on the RESET pin (of durations greater than 10 ns), as shown in Figure 143. If required, the serial interface registers can be cleared during operation either:

1. Through a hardware reset, or
2. By applying a software reset. When using the serial interface, set the RESET bit (D0 in register address 06h) high. This setting initializes the internal registers to the default values and then self-resets the RESET bit low. In this case, the RESET pin is kept low.

#### 9.5.1.1.1 Serial Register Write

The device internal register can be programmed with these steps:

1. Drive the SEN pin low,
2. Set the R/W bit to 0 (bit A15 of the 16-bit address),
3. Set bit A14 in the address field to 1,
4. Initiate a serial interface cycle by specifying the address of the register (A13 to A0) whose content must be written, and
5. Write the 8-bit data that are latched in on the SCLK rising edge.

Figure 143 and Table 6 show the timing requirements for the serial register write operation.

**Figure 143. Serial Register Write Timing Diagram**

**Table 6. Serial Interface Timing<sup>(1)</sup>**

		MIN	TYP	MAX	UNIT
$f_{SCLK}$	SCLK frequency (equal to $1 / t_{SCLK}$ )	> dc		20	MHz
$t_{SLOADS}$	SEN to SCLK setup time	25			ns
$t_{SLOADH}$	SCLK to SEN hold time	25			ns
$t_{DSU}$	SDIO setup time	25			ns
$t_{DH}$	SDIO hold time	25			ns

(1) Typical values are at 25°C, full temperature range is from  $T_{MIN} = -40^{\circ}\text{C}$  to  $T_{MAX} = 85^{\circ}\text{C}$ , and  $AVDD = DVDD = 1.8\text{ V}$ , unless otherwise noted.

9.5.1.1.2 Serial Register Readout

The device includes a mode where the contents of the internal registers can be read back using the SDOUT pin. This readback mode may be useful as a diagnostic check to verify the serial interface communication between the external controller and the ADC. The procedure to read the contents of the serial registers is as follows:

1. Drive the SEN pin low.
2. Set the R/W bit (A15) to 1. This setting disables any further writes to the registers.
3. Set bit A14 in the address field to 1.
4. Initiate a serial interface cycle specifying the address of the register (A13 to A0) whose content must be read.
5. The device outputs the contents (D7 to D0) of the selected register on the SDOUT pin.
6. The external controller can latch the contents at the SCLK rising edge.
7. To enable register writes, reset the R/W register bit to 0.

When READOUT is disabled, the SDOUT pin is in a high-impedance mode. If serial readout is not used, the SDOUT pin must float. Figure 144 shows a timing diagram of the serial register read operation. Data appear on the SDOUT pin at the SCLK falling edge with an approximate delay ( $t_{SD\_DELAY}$ ) of 20 ns, as shown in Figure 145.

Figure 144. Serial Register Read Timing Diagram

Figure 145. SDOUT Timing Diagram

### 9.5.2 Register Initialization

After power-up, the internal registers must be initialized to their default values through a hardware reset by applying a high pulse on the RESET pin, as shown in [Figure 146](#) and [Table 7](#).

**Figure 146. Initialization of Serial Registers after Power-Up**

**Table 7. Power-Up Timing**

		MIN	TYP	MAX	UNIT
$t_1$	Power-on delay from power-up to active high RESET pulse	1			ms
$t_2$	Reset pulse duration: active high RESET pulse duration	10			ns
$t_3$	Register write delay from RESET disable to SEN active	100			ns

If required, the serial interface registers can be cleared during operation either:

1. Through hardware reset, or
2. By applying a software reset. When using the serial interface, set the RESET bit (D0 in register address 06h) high. This setting initializes the internal registers to the default values and then self-resets the RESET bit low. In this case, the RESET pin is kept low.

## 9.6.1 Serial Register Description

### 9.6.1.1 Register 01h (address = 01h)

**Figure 147. Register 01h**

7	6	5	4	3	2	1	0
DIS DITH CHA		DIS DITH CHB		DIS DITH CHC		DIS DITH CHD	
R/W-0h		R/W-0h		R/W-0h		R/W-0h	

LEGEND: R/W = Read/Write; -n = value after reset

**Table 9. Register 01h Field Descriptions**

Bit	Field	Type	Reset	Description
7-6	DIS DITH CHA	R/W	0h	These bits enable or disable the on-chip dither. Control this bit along with bits 5 and 3 of register 134h. 00 = Default 11 = Dither is disabled for channel A. In this mode, SNR typically improves by 0.2 dB at 70 MHz.
5-4	DIS DITH CHB	R/W	0h	These bits enable or disable the on-chip dither. Control this bit along with bits 5 and 3 of register 434h. 00 = Default 11 = Dither is disabled for channel B. In this mode, SNR typically improves by 0.2 dB at 70 MHz.
3-2	DIS DITH CHC	R/W	0h	These bits enable or disable the on-chip dither. Control this bit along with bits 5 and 3 of register 534h. 00 = Default 11 = Dither is disabled for channel B. In this mode, SNR typically improves by 0.2 dB at 70 MHz.
1-0	DIS DITH CHD	R/W	0h	These bits enable or disable the on-chip dither. Control this bit along with bits 5 and 3 of register 234h. 00 = Default 11 = Dither is disabled for channel B. In this mode, SNR typically improves by 0.2 dB at 70 MHz.

### 9.6.1.2 Register 03h (address = 03h)

**Figure 148. Register 03h**

7	6	5	4	3	2	1	0
0	0	0	0	0	0	0	ODD EVEN
W-0h	W-0h	W-0h	W-0h	W-0h	W-0h	W-0h	R/W-0h

LEGEND: R/W = Read/Write; W = Write only; -n = value after reset

**Table 10. Register 03h Field Descriptions**

Bit	Field	Type	Reset	Description
7-6	0	W	0h	Must write 0.
0	ODD EVEN	R/W	0h	This bit selects the bit sequence on the output wires (in 2-wire mode only). 0 = Bits 0, 1, 2, and so forth appear on wire-0; bits 7, 8, 9, and so forth appear on wire-1. 1 = Bits 0, 2, 4, and so forth appear on wire-0; bits 1, 3, 5, and so forth appear on wire-1.

### 9.6.1.3 Register 04h (address = 04h)

**Figure 149. Register 04h**

7	6	5	4	3	2	1	0
0	0	0	0	0	0	0	FLIP WIRE
W-0h	W-0h	W-0h	W-0h	W-0h	W-0h	W-0h	R/W-0h

LEGEND: R/W = Read/Write; W = Write only; -n = value after reset

**Table 11. Register 04h Field Descriptions**

Bit	Field	Type	Reset	Description
7-1	0	W	0h	Must write 0.
0	FLIP WIRE	R/W	0h	This bit flips the data on the output wires. Valid only in two wire configuration. 0 = Default 1 = Data on output wires is flipped. Pin D0x becomes D1x, and vice versa.

### 9.6.1.4 Register 05h (address = 05h)

**Figure 150. Register 05h**

7	6	5	4	3	2	1	0
0	0	0	0	0	0	0	1W-2W
W-0h	W-0h	W-0h	W-0h	W-0h	W-0h	W-0h	R/W-0h

LEGEND: R/W = Read/Write; W = Write only; -n = value after reset

**Table 12. Register 05h Field Descriptions**

Bit	Field	Type	Reset	Description
7-1	0	W	0h	Must write 0.
0	1W-2W	R/W	0h	This bit transmits output data on either one or two wires. 0 = Output data are transmitted on two wires (Dx0P, Dx0M and Dx1P, Dx1M) 1 = Output data are transmitted on one wire (Dx0P, Dx0M). In this mode, the recommended $f_S$ is less than 80 MSPS.

### 9.6.1.5 Register 06h (address = 06h)

**Figure 151. Register 06h**

7	6	5	4	3	2	1	0
0	0	0	0	0	0	TEST PATTERN EN	RESET
W-0h	W-0h	W-0h	W-0h	W-0h	W-0h	R/W-0h	R/W-0h

LEGEND: R/W = Read/Write; W = Write only; -n = value after reset

**Table 13. Register 06h Field Descriptions**

Bit	Field	Type	Reset	Description
7-2	0	W	0h	Must write 0.
1	TEST PATTERN EN	R/W	0h	This bit enables test pattern selection for the digital outputs. 0 = Normal output 1 = Test pattern output enabled
0	RESET	R/W	0h	This bit applies a software reset. This bit resets all internal registers to the default values and self-clears to 0.

**9.6.1.6 Register 07h (address = 07h)**
**Figure 152. Register 07h**

7	6	5	4	3	2	1	0
0	0	0	0	0	0	0	OVR ON LSB

Bit	Field	Type	Reset	Description
7-1	0	W	0h	Must write 0.
0	PDN SYSREF	R/W	0h	If the SYSREF pins are not used in the system, the SYSREF buffer must be powered down by setting this bit. 0 = Normal operation 1 = Powers down the SYSREF buffer

10 Applications and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

Typical applications involving transformer-coupled circuits are discussed in this section. Transformers (such as ADT1-1WT or WBC1-1) can be used up to 250 MHz to achieve good phase and amplitude balances at ADC inputs. When designing the dc driving circuits, the ADC input impedance must be considered. Figure 181 and Figure 182 show the impedance ( $Z_{in} = R_{in} || C_{in}$ ) across the ADC input pins.

## 10.2 Typical Applications

### 10.2.1 Driving Circuit Design: Low Input Frequencies

Figure 183. Driving Circuit for Low Input Frequencies

#### 10.2.1.1 Design Requirements

For optimum performance, the analog inputs must be driven differentially. An optional 5-Ω to 15-Ω resistor in series with each input pin can be kept to damp out ringing caused by package parasitic. The drive circuit may have to be designed to minimize the impact of kick-back noise generated by sampling switches opening and closing inside the ADC, as well as ensuring low insertion loss over the desired frequency range and matched impedance to the source.

#### 10.2.1.2 Detailed Design Procedure

A typical application involving using two back-to-back coupled transformers is illustrated in Figure 183. The circuit is optimized for low input frequencies. An external R-C-R filter using 50-Ω resistors and a 22-pF capacitor is used with the series inductor (39 nH), this combination helps absorb the sampling glitches.

#### 10.2.1.3 Application Curve

Figure 184 shows the performance obtained by using the circuit shown in Figure 183.

SFDR = 97 dBc, SNR = 70.4 dBFS, SINAD = 70.4 dBFS,  
THD = 98 dBc, HD2 = 95 dBc, HD3 = 97 dBc

Figure 184. Performance FFT at 10 MHz (Low Input Frequency)

**Typical Applications (continued)**
**10.2.2 Driving Circuit Design: Input Frequencies Between 100 MHz to 230 MHz**

**Figure 185. Driving Circuit for Mid-Range Input Frequencies ( $100 \text{ MHz} < f_{\text{IN}} < 230 \text{ MHz}$ )**

**10.2.2.1 Design Requirements**

See the [Design Requirements](#) section for further details.

**10.2.2.2 Detailed Design Procedure**

When input frequencies are between 100 MHz to 230 MHz, an R-LC-R circuit can be used to optimize performance, as shown in [Figure 185](#).

**10.2.2.3 Application Curve**

[Figure 186](#) shows the performance obtained by using the circuit shown in [Figure 185](#).

SFDR = 86 dBc, SNR = 69.8 dBFS, SINAD = 69.8 dBFS,  
THD = 91 dBc, HD2 = 86 dBc, HD3 = 101 dBc

**Figure 186. Performance FFT at 170 MHz (Mid Input Frequency)**

## Typical Applications (continued)

### 10.2.3 Driving Circuit Design: Input Frequencies Greater than 230 MHz

Figure 187. Driving Circuit for High Input Frequencies ( $f_{IN} > 230$  MHz)

#### 10.2.3.1 Design Requirements

See the [Design Requirements](#) section for further details.

#### 10.2.3.2 Detailed Design Procedure

For high input frequencies ( $> 230$  MHz), using the R-C-R or R-LC-R circuit does not show significant improvement in performance. However, a series resistance of  $10\ \Omega$  can be used as shown in [Figure 187](#).

#### 10.2.3.3 Application Curve

[Figure 188](#) shows the performance obtained by using the circuit shown in [Figure 187](#).

SFDR = 71 dBc, SNR = 67.2 dBFS, SINAD = 66.5 dBFS,  
THD = 74 dBc, HD2 = 71 dBc, HD3 = 79 dBc

Figure 188. Performance FFT at 450 MHz (High Input Frequency)

## 11 Power Supply Recommendations

The device requires a 1.8-V nominal supply for AVDD and DVDD. There are no specific sequence power-supply requirements during device power-up. AVDD and DVDD can power up in any order.

## 12 Layout

### 12.1 Layout Guidelines

The ADC342x EVM layout can be used as a reference layout to obtain the best performance. A layout diagram of the EVM top layer is provided in [Figure 189](#). Some important points to remember during laying out the board are:

1. Analog inputs are located on opposite sides of the device pin out to ensure minimum crosstalk on the package level. To minimize crosstalk onboard, the analog inputs must exit the pin out in opposite directions, as shown in the reference layout of [Figure 189](#) as much as possible.
2. In the device pin out, the sampling clock is located on a side perpendicular to the analog inputs in order to minimize coupling between them. This configuration is also maintained on the reference layout of [Figure 189](#) as much as possible.
3. Keep digital outputs away from the analog inputs. When these digital outputs exit the pin out, the digital output traces must not be kept parallel to the analog input traces because this configuration can result in coupling from digital outputs to analog inputs and degrade performance. All digital output traces to the receiver [such as a field-programmable gate array (FPGA) or an application-specific integrated circuit (ASIC)] must be matched in length to avoid skew among outputs.
4. At each power-supply pin (AVDD and DVDD), keep a 0.1- $\mu$ F decoupling capacitor close to the device. A separate decoupling capacitor group consisting of a parallel combination of 10- $\mu$ F, 1- $\mu$ F, and 0.1- $\mu$ F capacitors can be kept close to the supply source.

### 12.2 Layout Example

**Figure 189. Typical Layout of the ADC342x Board**

## 13 Device and Documentation Support

### 13.1 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

### 13.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At [e2e.ti.com](http://e2e.ti.com), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 13.3 Trademarks

E2E is a trademark of Texas Instruments.  
 PowerPAD is a trademark of Texas Instruments, Inc.  
 All other trademarks are the property of their respective owners.

### 13.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 13.5 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

RTQ (S-PVQFN-N56)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5-1994.
  - This drawing is subject to change without notice.
  - QFN (Quad Flatpack No-Lead) Package configuration.
  - The package thermal pad must be soldered to the board for thermal and mechanical performance.
  - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
  - Package complies to JEDEC MO-220.

# THERMAL PAD MECHANICAL DATA

RTQ (S-PVQFN-N56)

PLASTIC QUAD FLATPACK NO-LEAD

## THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

4206252-6/Q 03/15

NOTE: All linear dimensions are in millimeters

RTQ (S-PVQFN-N56)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - E. Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in thermal pad.

## IMPORTANT NOTICE FOR TI DESIGN INFORMATION AND RESOURCES

Texas Instruments Incorporated ("TI") technical, application or other design advice, services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using any particular TI Resource in any way, you (individually or, if you are acting on behalf of a company, your company) agree to use it solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources.

You understand and agree that you remain responsible for using your independent analysis, evaluation and judgment in designing your applications and that you have full and exclusive responsibility to assure the safety of your applications and compliance of your applications (and of all TI products used in or for your applications) with all applicable regulations, laws and other applicable requirements. You represent that, with respect to your applications, you have all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. You agree that prior to using or distributing any applications that include TI products, you will thoroughly test such applications and the functionality of such TI products as used in such applications. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

You are authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING TI RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY YOU AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You agree to fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of your non-compliance with the terms and provisions of this Notice.

This Notice applies to TI Resources. Additional terms apply to the use and purchase of certain types of materials, TI products and services. These include; without limitation, TI's standard terms for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>), [evaluation modules](#), and [samples](http://www.ti.com/sc/docs/sampterm.htm) (<http://www.ti.com/sc/docs/sampterm.htm>).
